Cloud computing for real estate agents

Do you need a server to run your applications?

Are you currently running Rockend's REST Professional, fileSMART or STRATA Master applications? These programs are designed to run at their best on a server to allow simultaneous access for multiple users.

If you need to purchase a new server, or upgrade an existing server, to run these applications we recommend you consider a cloud server solution, also known as a virtual private server (VPS) solution. Cloud solutions are now proven to be secure and cost-effective.

Advantages of a cloud server

Using a cloud server gives you all the advantages of maintaining your own server without the headaches. Your own cloud server allows you to run all your software and applications securely and efficiently. In addition to Rockend's real estate applications other business applications such as MYOB can also be hosted on your cloud server.

You no longer have to worry about software failures, operating system compatibility problems, loss of data or system crashes. You can access your data securely from any location and on any of your devices (PC, Mac, tablet, or phone). Once set up you can also use the cloud server as your main file storage to improve your backup and risk management. You can save all your electronic files (MSWord, MSExcel, PDFs etc) to the cloud.

Outsource your IT to the cloud and save significant costs and reduce your stress.

Specialist cloud system integration

CHILL IT is a Rockend business partner and has experience hosting REST Professional, fileSMART and STRATA Master in the cloud.

To migrate your existing business systems (including REST Professional and other Rockend applications) to a cloud-based system requires support from a specialist cloud system integrator. CHILL IT provides specific skills in migrating real estate agents to cloud-based computing. They are experts in cloud-based infrastructure, cloud networks, and cloud migration and deployment.

CHILL IT cloud solutions

CHILL IT offers a full range of cloud solutions from managed Microsoft Exchange mailboxes, file sharing and CRM systems; system and data backup; through to completely outsourced hosted server farms with virtualisation, replication and PAYG capacity management.

CHILL IT uses secure data centres in Sydney and Melbourne. Your business data remains in Australia ensuring you can guarantee its security and meet your privacy obligations under the new legislation. CHILL IT provides full support for their services and operates a 24/7 helpdesk should you need advice or assistance.

Call CHILL IT

CHILL IT has offices around Australia. Call your nearest office to find out how to migrate your systems to a cloud server 1300 796 246 or email sales@chillit.com.au
